## CONSTRUCTION NOTICE #1: Cherry Street Stormwater Management Facility

Waterfront Toronto has awarded the contract for the construction of the Cherry Street Stormwater Management Facility and the completion of the Cherry Street Sewage Pumping Station to Graham Construction. This facility is located at the intersection of Cherry Street and Lake Shore Boulevard East. When completed, this system will serve East Bayfront, the West Don Lands and future communities north of the Keating Channel, by receiving and treating stormwater run-off created by rain and melting snow.

Graham Construction has mobilized on site and site preparation work is underway. Work is currently focused on the removal of significant garbage and debris from the site, and the erection of construction hoarding. The completion of the Cherry Street Sewage Pumping Station will be the first priority.

In September, site activities will include the completion of the pumping station, site surveying, installation of the construction dewatering system, removal of some trees and vegetation, excavation of contaminated soil and removal from the site, and replacement with clean fill.

**WHAT TO EXPECT DURING CONSTRUCTION:** Trucks will frequently need to cross the Lower Don Trail path in order to enter and exit the construction site. Flagmen will be on site to safely direct traffic in the area. We ask that all cyclists obey the signs placed at key locations directing them to dismount from their bicycles for safety measures.

Throughout construction, work will be concentrated within the staging area and will have little impact on vehicular traffic along Lake Shore Boulevard East and Cherry Street.

Construction of the Stormwater Management Facility is expected to be completed by summer 2020. Waterfront Toronto will issue construction notices for this project on an as needed basis.
