CONSTRUCTION NOTICE #6: IN-WATER PIPES IN EAST BAYFRONT

Background

Waterfront Toronto has begun work on the final piece of a large Stormwater Management System that services East Bayfront, the West Don Lands and future communities north of the Keating Channel.

The final piece includes construction of in-water pipes along the section of the Water’s Edge Promenade (WEP) spanning the foot of Sherbourne Common from approximately Dockside Drive to the southern point of 15 Merchants’ Wharf, also known as the Aqualina at Bayside condos. When complete, the in-water pipes will help convey stormwater to the Cherry Street Stormwater Management Facility where it will be treated to remove pollutants before the water flows to Lake Ontario.

Updates:

Weekend Construction

On Saturday, April 30, 2022, our contractor, Clearway, will continue installation and concrete placement work for raked piles. Once complete, the piles will help to support the in-water pipe on the waterside of the Water’s Edge Promenade (WEP).

As per the City of Toronto’s bylaw, construction work on Saturday will take place between the hours of 9 a.m. -7 p.m. on the waterside of the Water’s Edge Promenade.

During this period, moderate vibrations and noise near the site are expected as well as a crane and vessels in the water. Pedestrians and cyclists will still have access to the full length of the WEP during this time.

Timeline

Construction is anticipated to be complete by December 2022.

About the Stormwater Management System

For more information about the Stormwater Management System, the Cherry Street Stormwater Management Facility and how the in-water pipes connect to this system, please refer to our [project page](#).
