
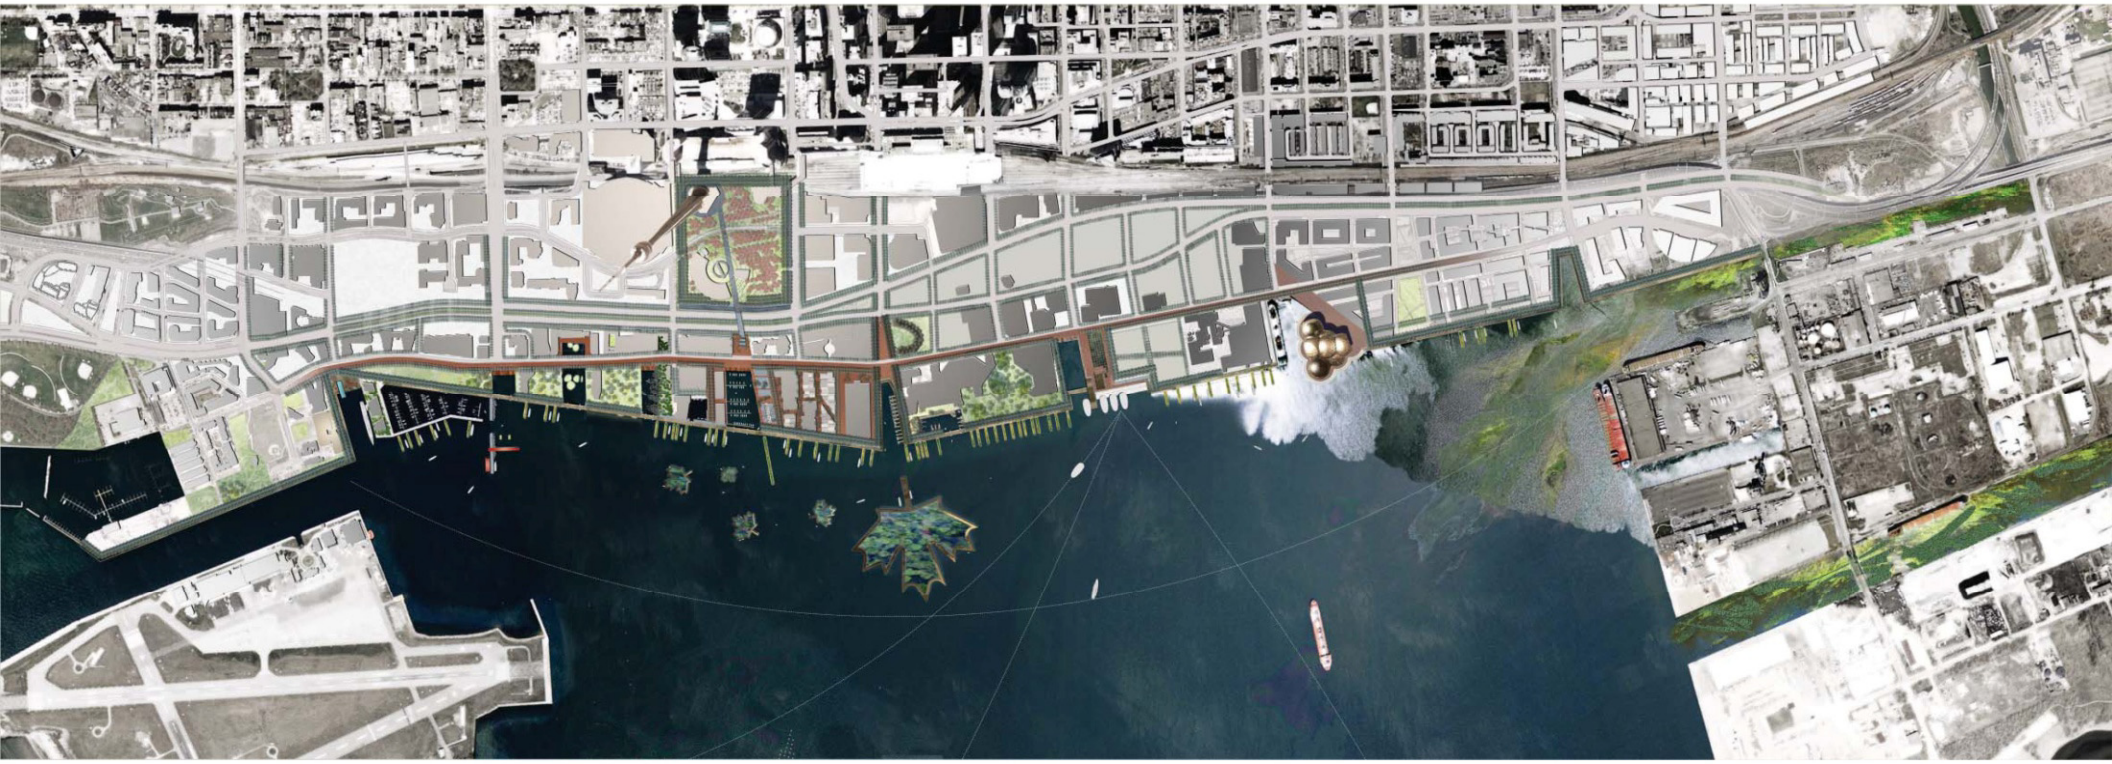
TORONTO'S DOWNTOWN WATERFRONT MASTER PLAN

Adriaan Geuze, West 8+DTAH

WATERFRONTtoronto

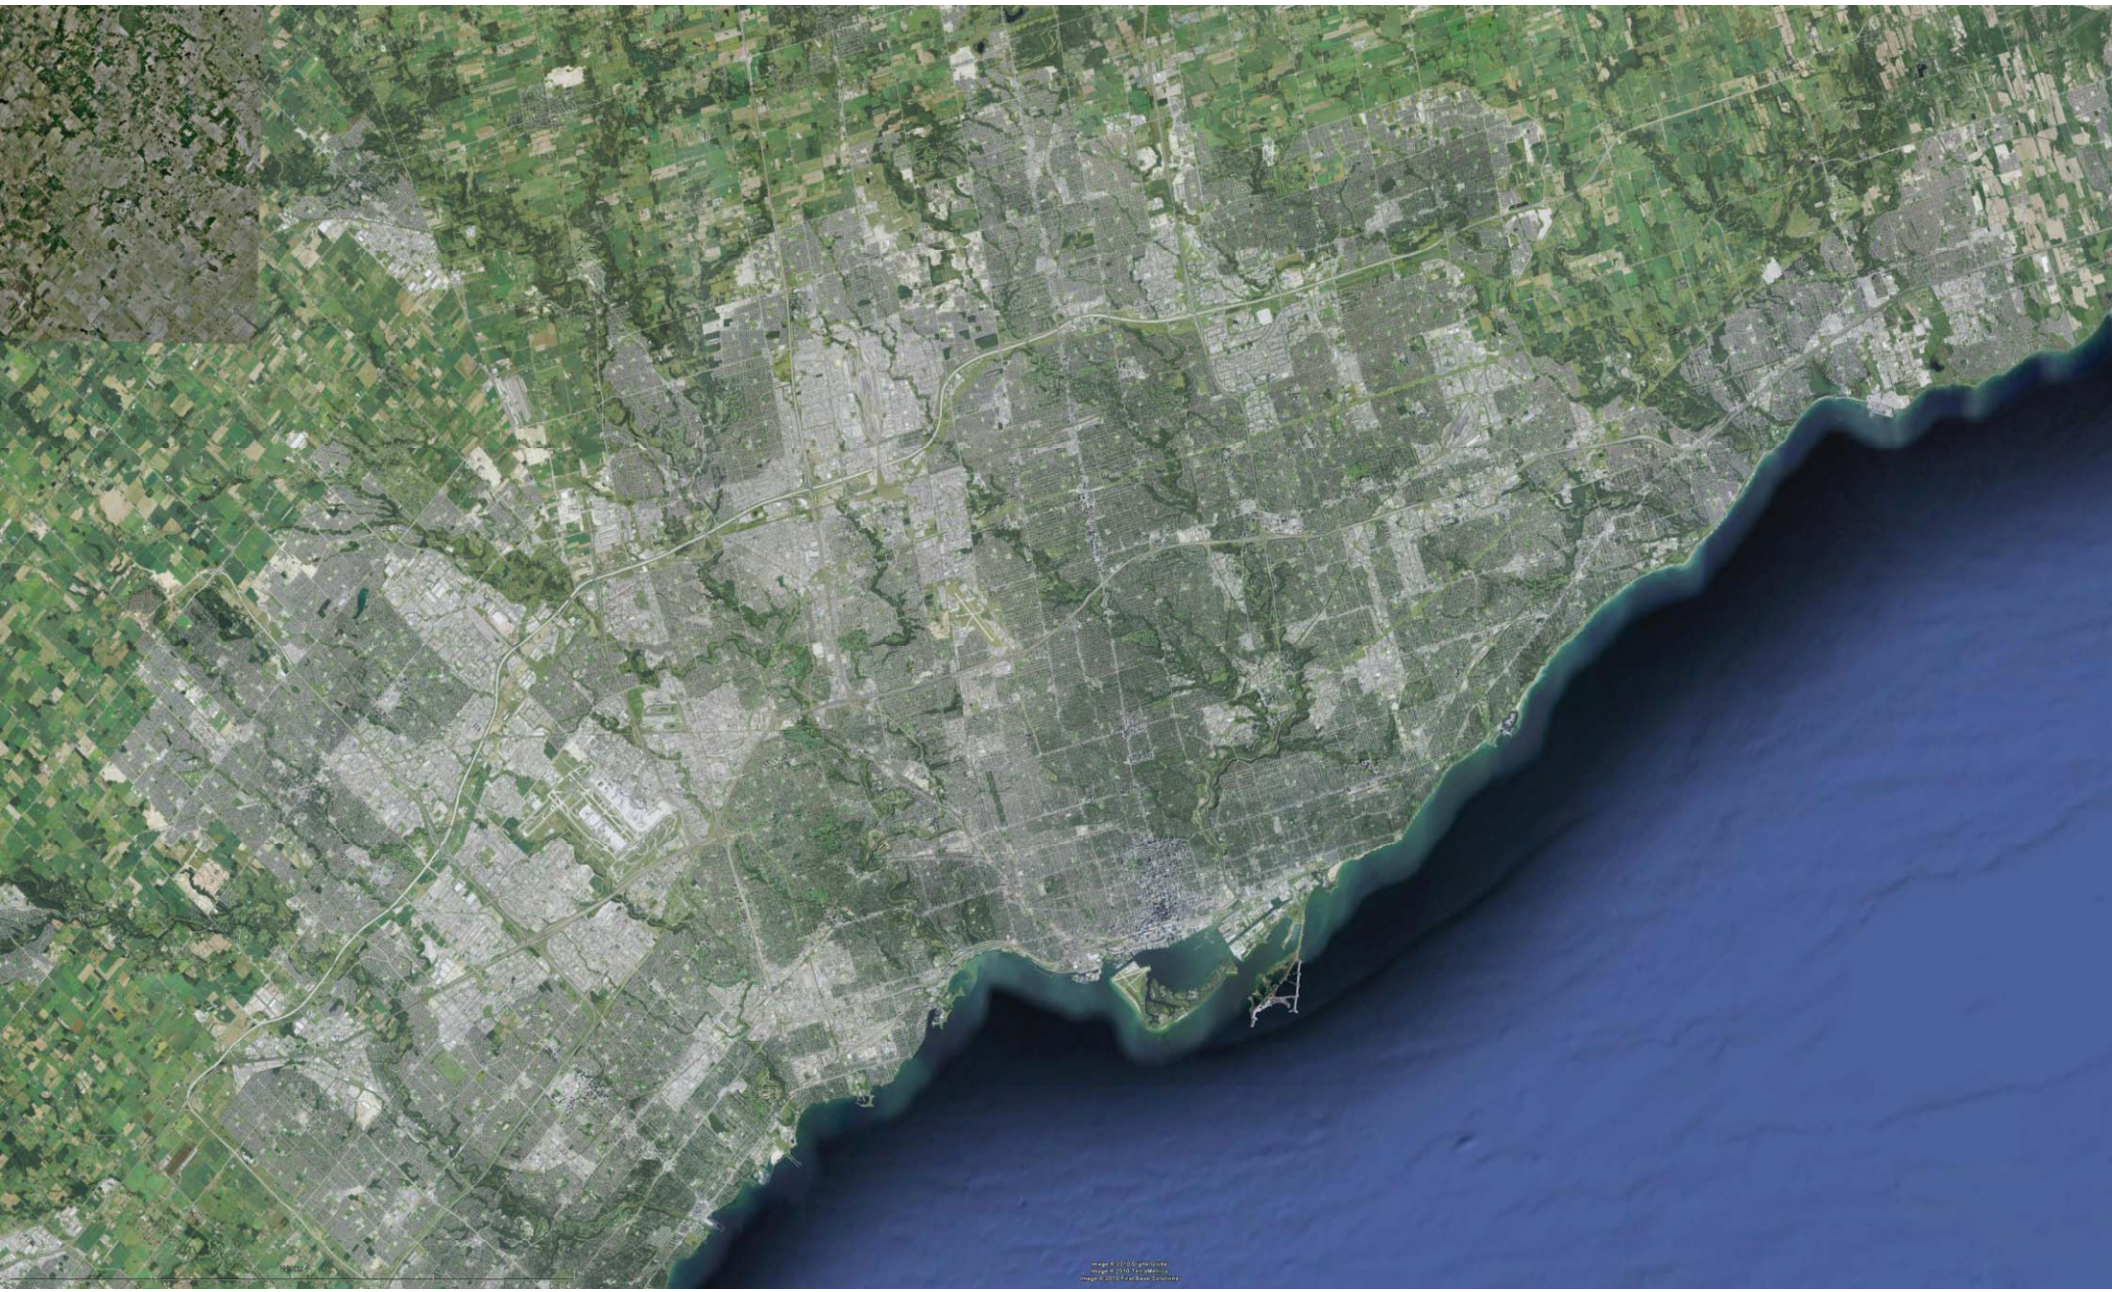
TORONTO'S DOWNTOWN WATERFRONT MASTER PLAN

WATERFRONToronto



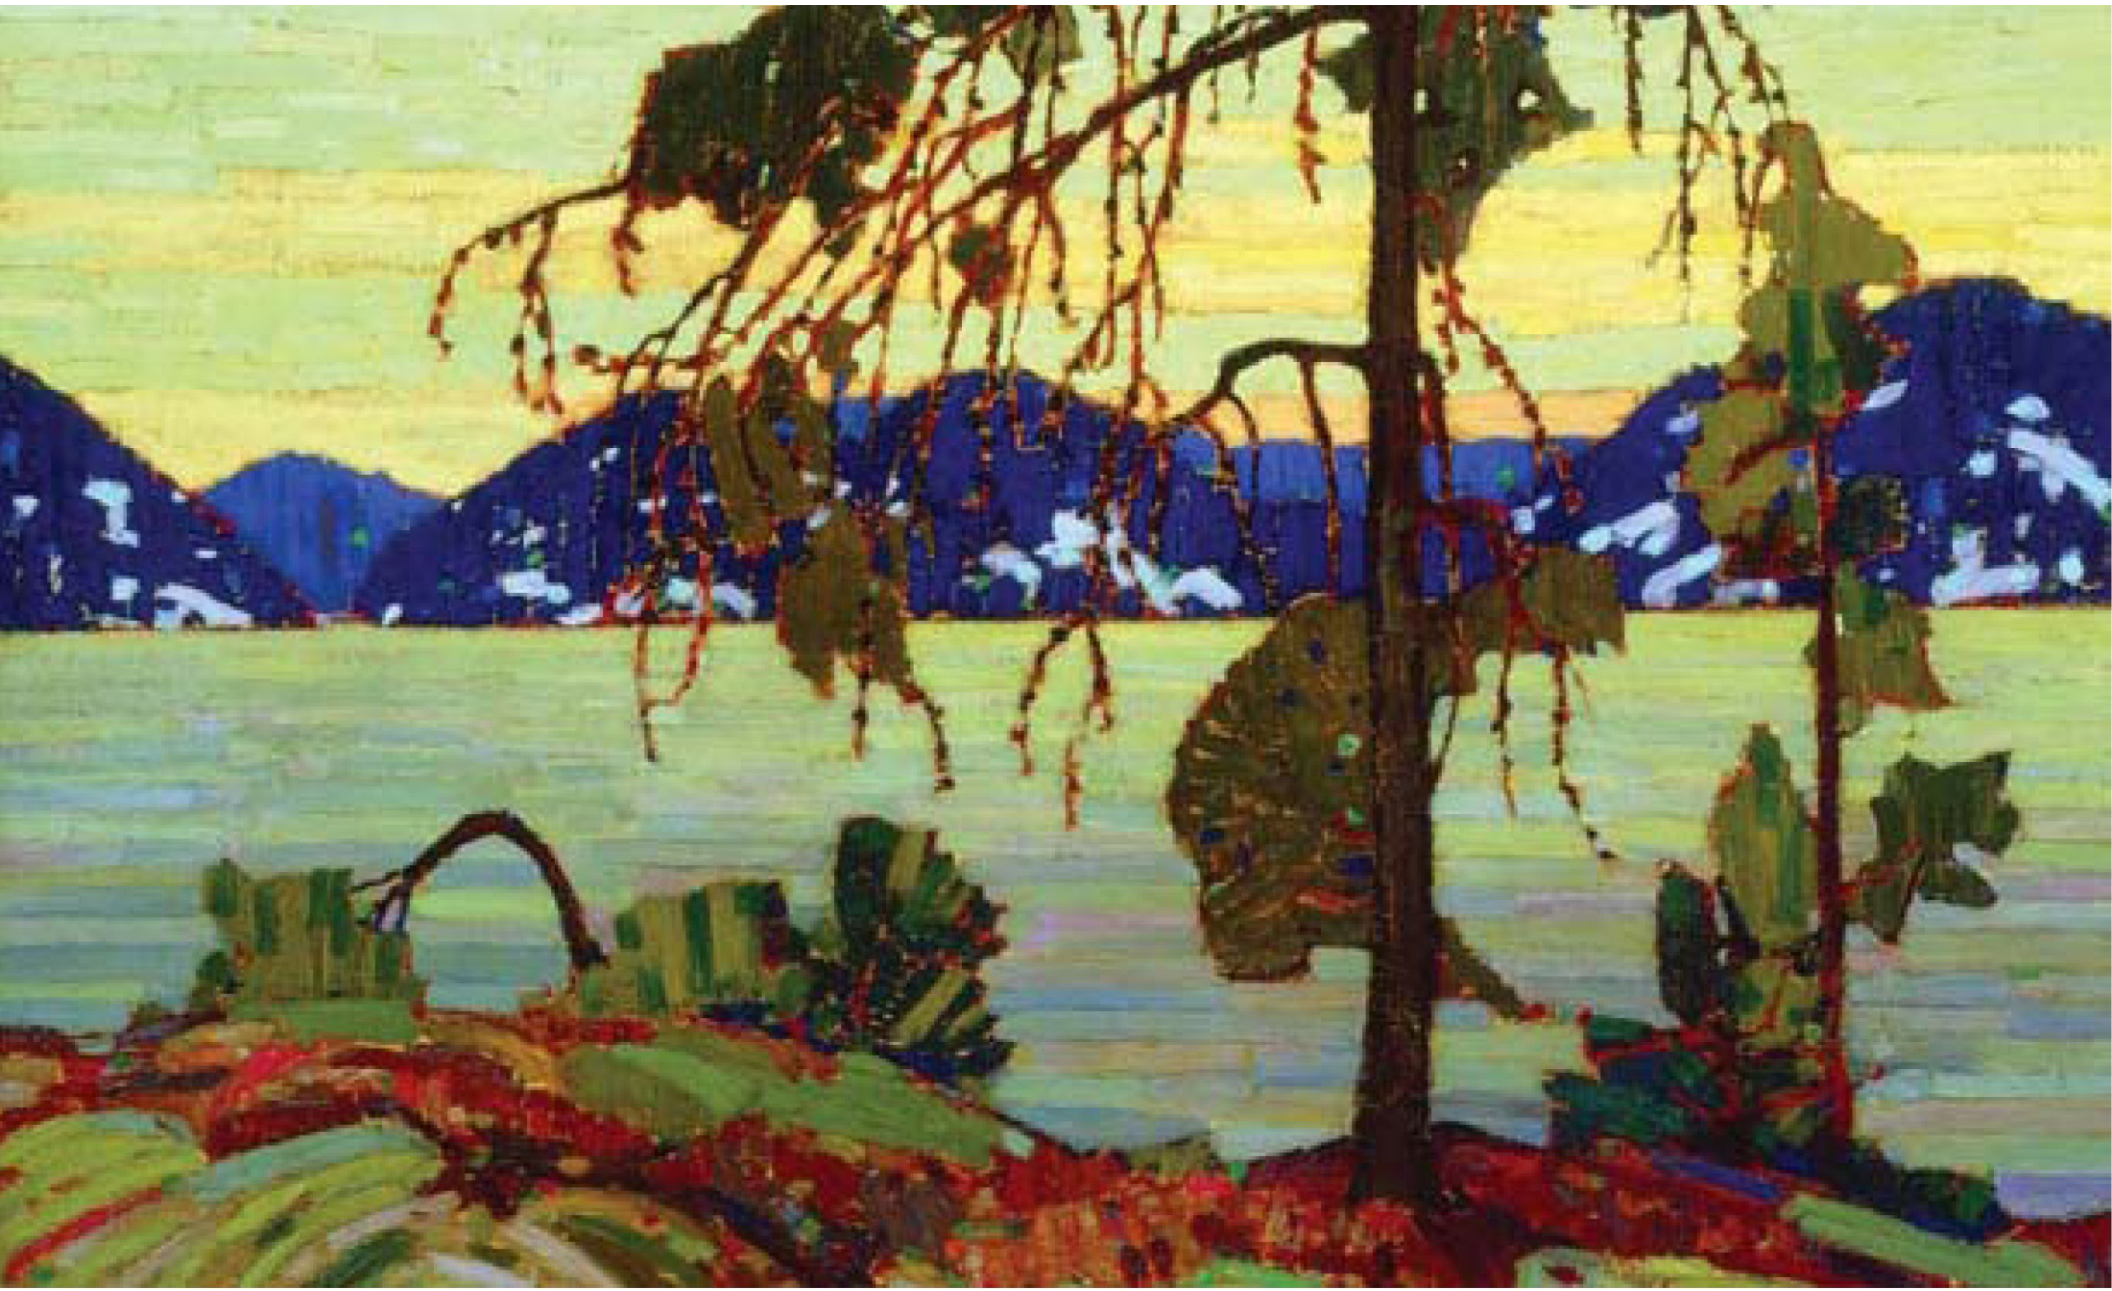
The Downtown Waterfront will put Toronto at the forefront of global cities in the 21st century.

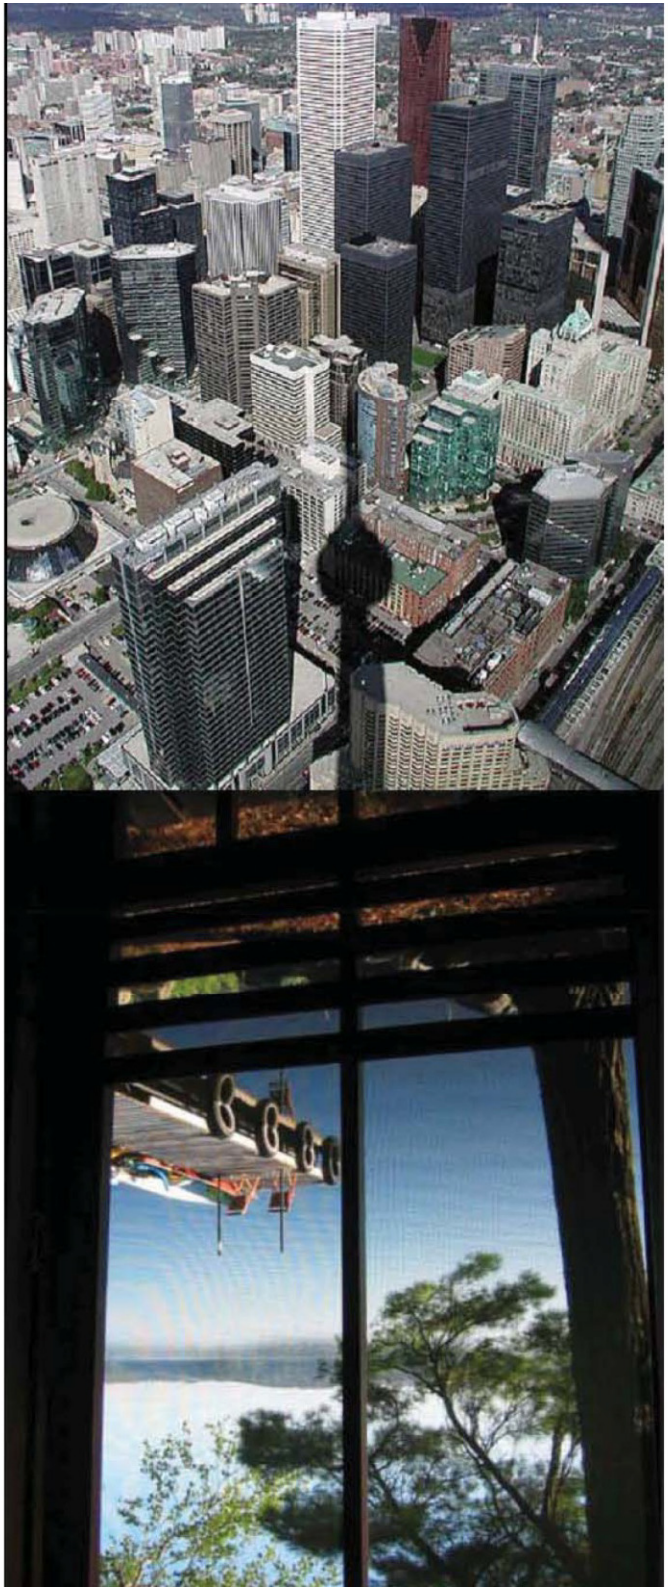
Our new waterfront will ultimately define how Toronto, Ontario, and Canada are perceived by the world.



The Vision sets a comprehensive strategy for conherence and continuity across the lakefront.

The plan binds together the existing disparate parts of the waterfront into a clear and powerful identity for a coherent Downtown Waterfront.

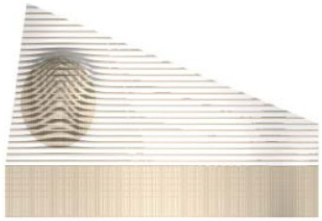




1. Little Norway Park
2. Ireland Park
3. Canada Malting Silos Retrofit
4. Portland WaveDeck
5. Marina Quay West park development
6. Music Garden
7. Spadina Quay Wetland
8. Spadina WaveDeck
9. Spadina Footbridge
10. HTO Park West
11. Peter Footbridge
12. HTO Park East
13. Rees WaveDeck
14. Rees Footbridge
15. Police Footbridge
16. Simcoe WaveDeck
17. Simcoe Footbridge
18. Canada Square mixed-use Cultural Village
19. York WaveDeck
20. Ferry Docks
21. Yonge WaveDeck
22. Anticipated Foot of Yonge Open Space
23. Jarvis WaveDeck
24. Sugar Beach Park
25. Sherbourne Park North
26. Sherbourne Park South
27. Parliament WaveDeck
28. Parliament Footbridge
29. Finger Piers

Access and arrival to the waterfront is improved.

The interaction between the city and its water-front is reinforced with improved connections in access including the Martin Goodman Trail, transit lines and spectacular new Wavedeck gateways at the terminus of city streets.



Portland Slip
Width at Head of Slip: 66.5m

Spadina Slip
Width at Head of Slip: 60.5m

Rees Slip
Width at Head of Slip: 38.8m

Simcoe Slip
Width at Head of Slip: 63.8m

York Slip
Width at Head of Slip: 32.5m

Yonge Slip
Width at Head of Slip: 53m

Jarvis Slip
Width at Head of Slip: 68m

Parliament Slip
Width at Head of Slip: 45m

EMPIRE • SANDY

Queens Quay will be transformed into a world class destination boulevard and neighbourhood main street.

The vibrant central spine of the waterfront will unify the entire district for leisure, commerce, and public transportation to create the iconic waterfront boulevard that Toronto never had.

Bathurst Street
Portland Street
Spadina Avenue
Rees Street
Robertson Crescent

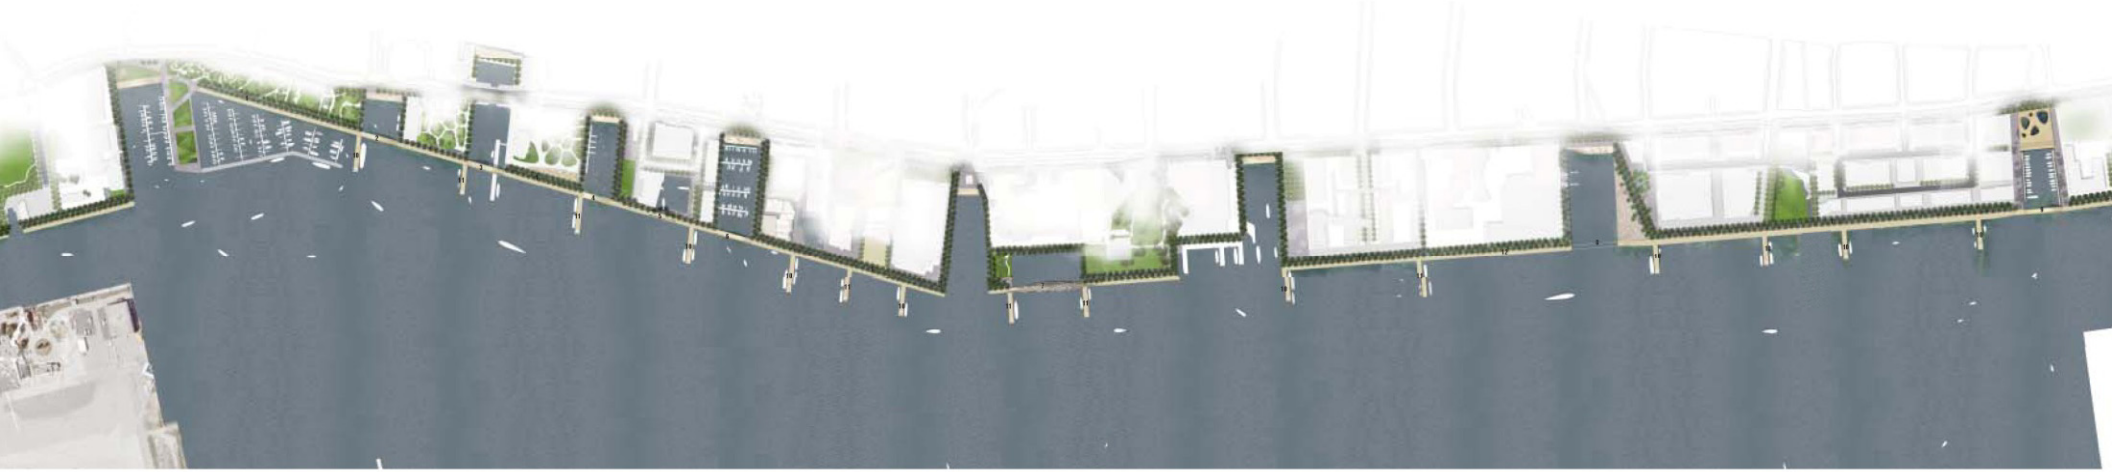
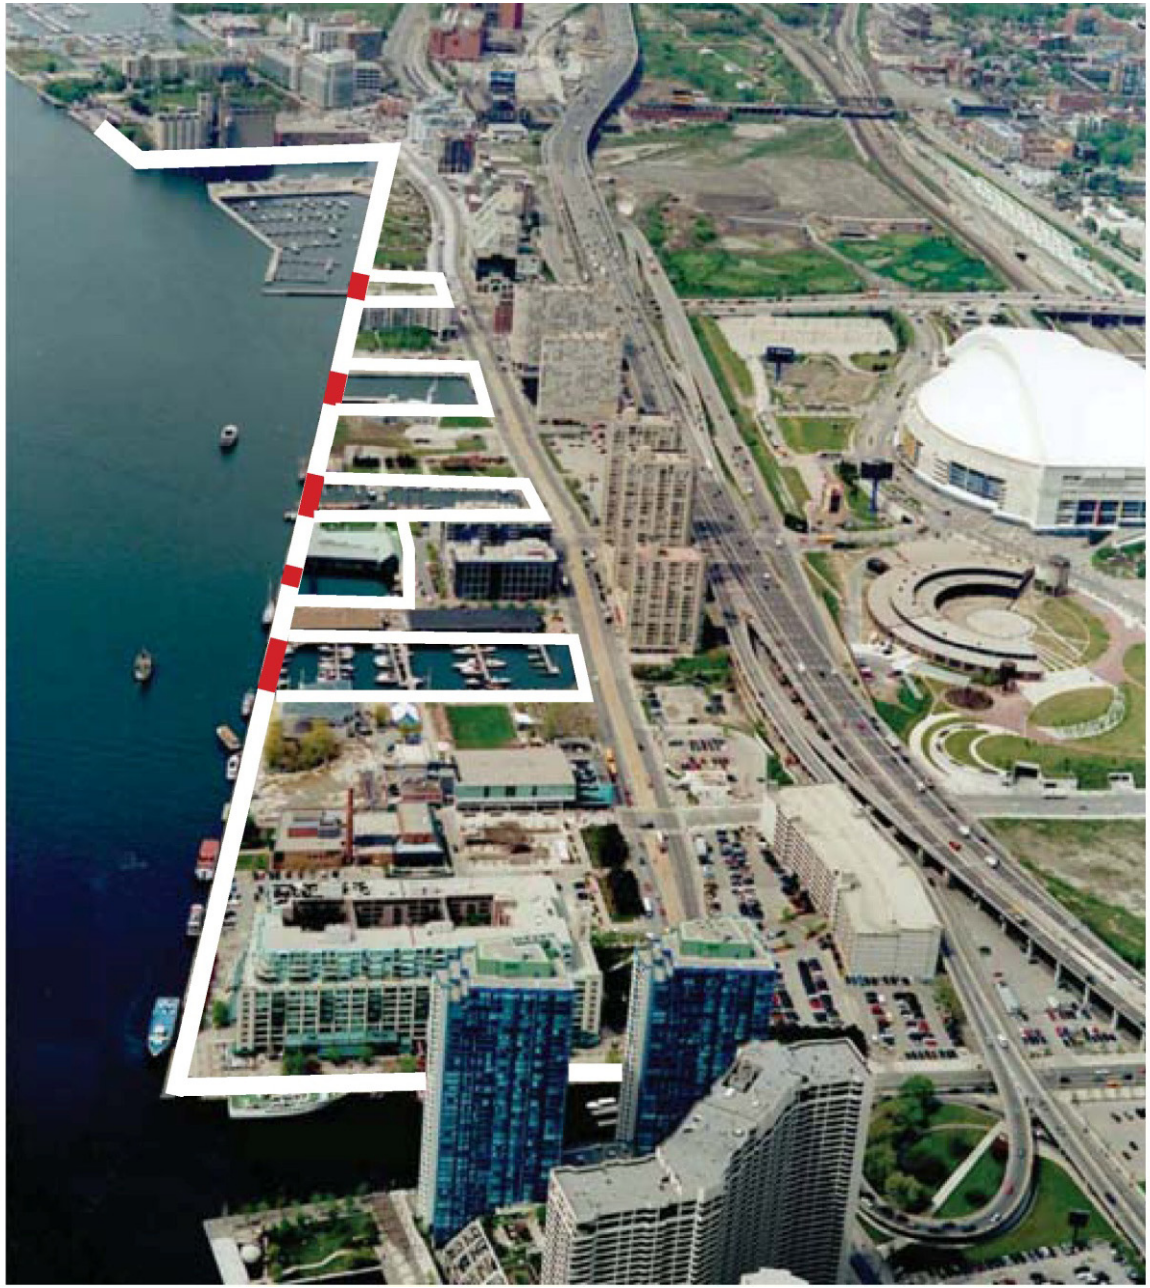
Dockside Drive
Bonnycastle Street
Small Street
Parliament Street

Quay W
Queens
235

The water's edge is 100% publicly accessible.

The continuous water's edge route, composed of granite promenade and timber boardwalk, is fully public and expresses a coherent public realm where the city meets the lake.





Spadina Bridge
61.5m span

Peter Bridge
60.9m span

Rees Lift Bridge
42.1m span

Police Bridge
10.75m span (over water)
extended to 29.9m span total

Simcoe Lift Bridge
57.6m span

Parliament Lift Bridge
71.6m span

An expanded hub for boating and marine activities in Toronto Bay.

The plan increases the overall mooring potential while providing a new order and quality of public experience along the water's edge.

		VESSEL TYPE	MOORING ZONE
	up to 60m	ASTA/Other Tall Ships	long vessel mooring / dock wall mooring
	up to 40m	TPVA Commmercial Vessels	fixed pier mooring
	up to 35m	GLCC Cruise Ships	fixed pier mooring
	up to 30m	Police and Fire Boats	Police piers
	up to 20m	Day/Transient Keelboats	Marinas, fixed pier / dock wall mooring
	up to 6m	Dinghies	Marinas
	65 to 100m	long vessel as GLCC Cruise Ship	not to be moored at fixed piers or along dock wall

A spectacular and sustainable public realm is produced through the integrated design of infrastructure, public space & ecology.

These innovative hybrid public space designs reflect the serious commitment to sustainability at all levels within the project.

Public spaces will provide a variety of public experiences.

A collection of diverse public settings across the waterfront is stiched together through the public realm and anchored by the York Quay Cultural Village at the heart of the waterfront.

Streets and sidewalks will form the simple and robust ‘glue’ to bind the waterfront precincts.

They establish a clear character for the streetscapes which link the precincts and bind Queens Quay to the Water’s Edge.

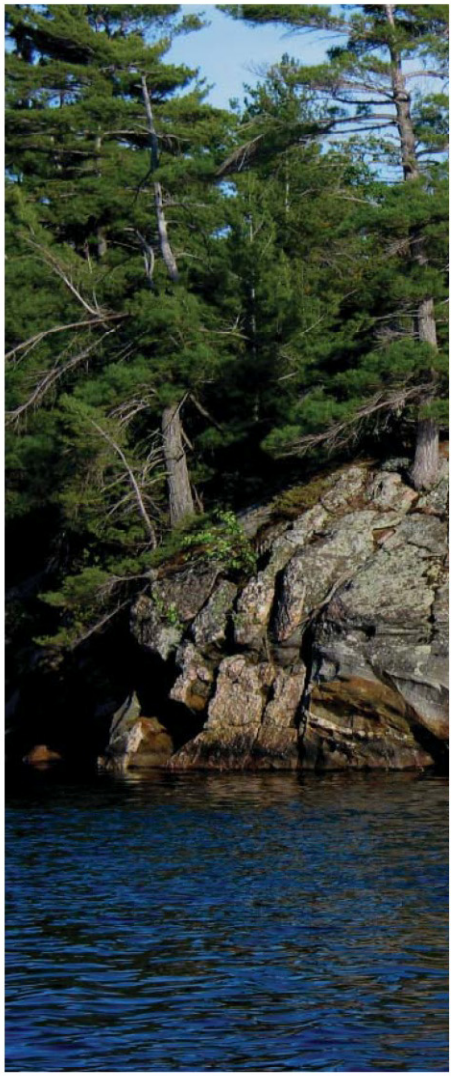
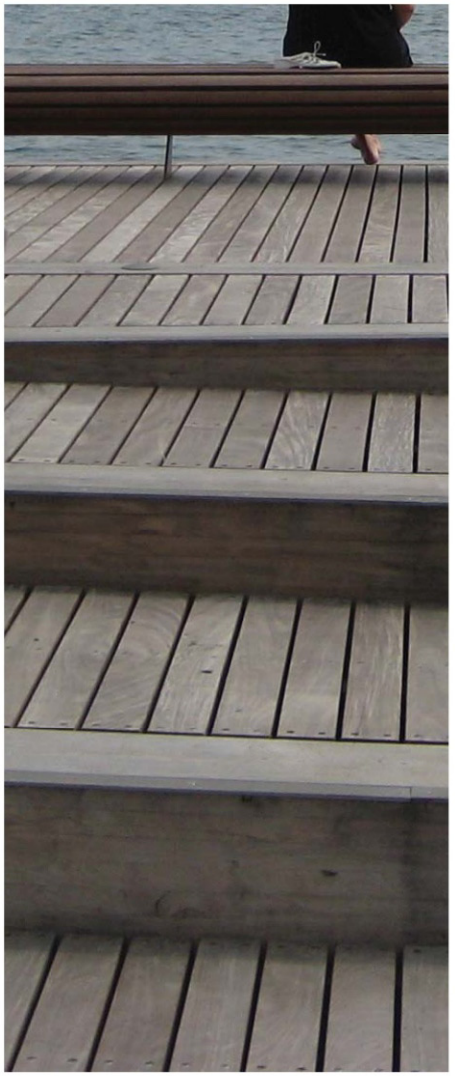
Bow Street
Guild Street
Parliament Street
Pedestrian Bridge
Pedestrian Bridge
Pedestrian Bridge

A family of materials and furnishings will create identity for the waterfront.

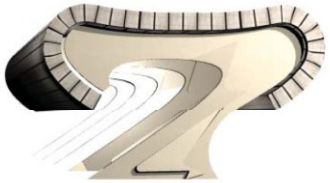
A priority is placed upon installing a set of materials and furnishings which provide visual continuity and consistency to reinforce the identity of the Canadian Lakefront.



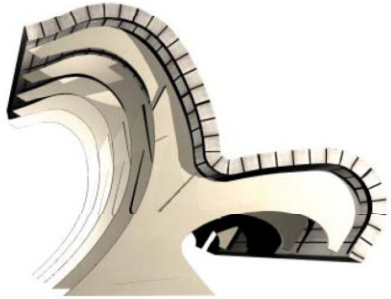


Granite Mosaic Type A - Outline
Queens Quay Boulevard

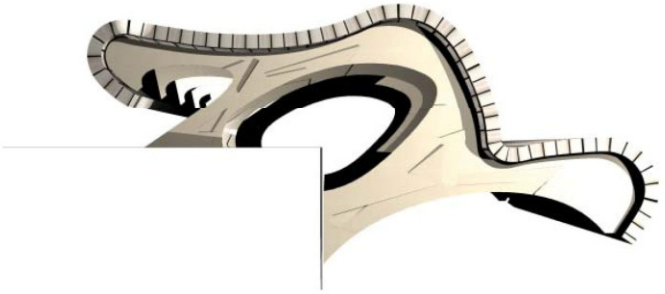
Granite Mosaic Type B - Silhouette
Water's Edge Promenade



1. Basic bench



2. Bench with backrest



3. Dockwall bench - transition from water's edge boardwalk to promenade

A coherent signage/wayfinding system will refine the legibility of the public realm.

Signage/wayfinding is conceived as an integrated system within the public realm that will ease orientation and aim to reduce visual clutter.

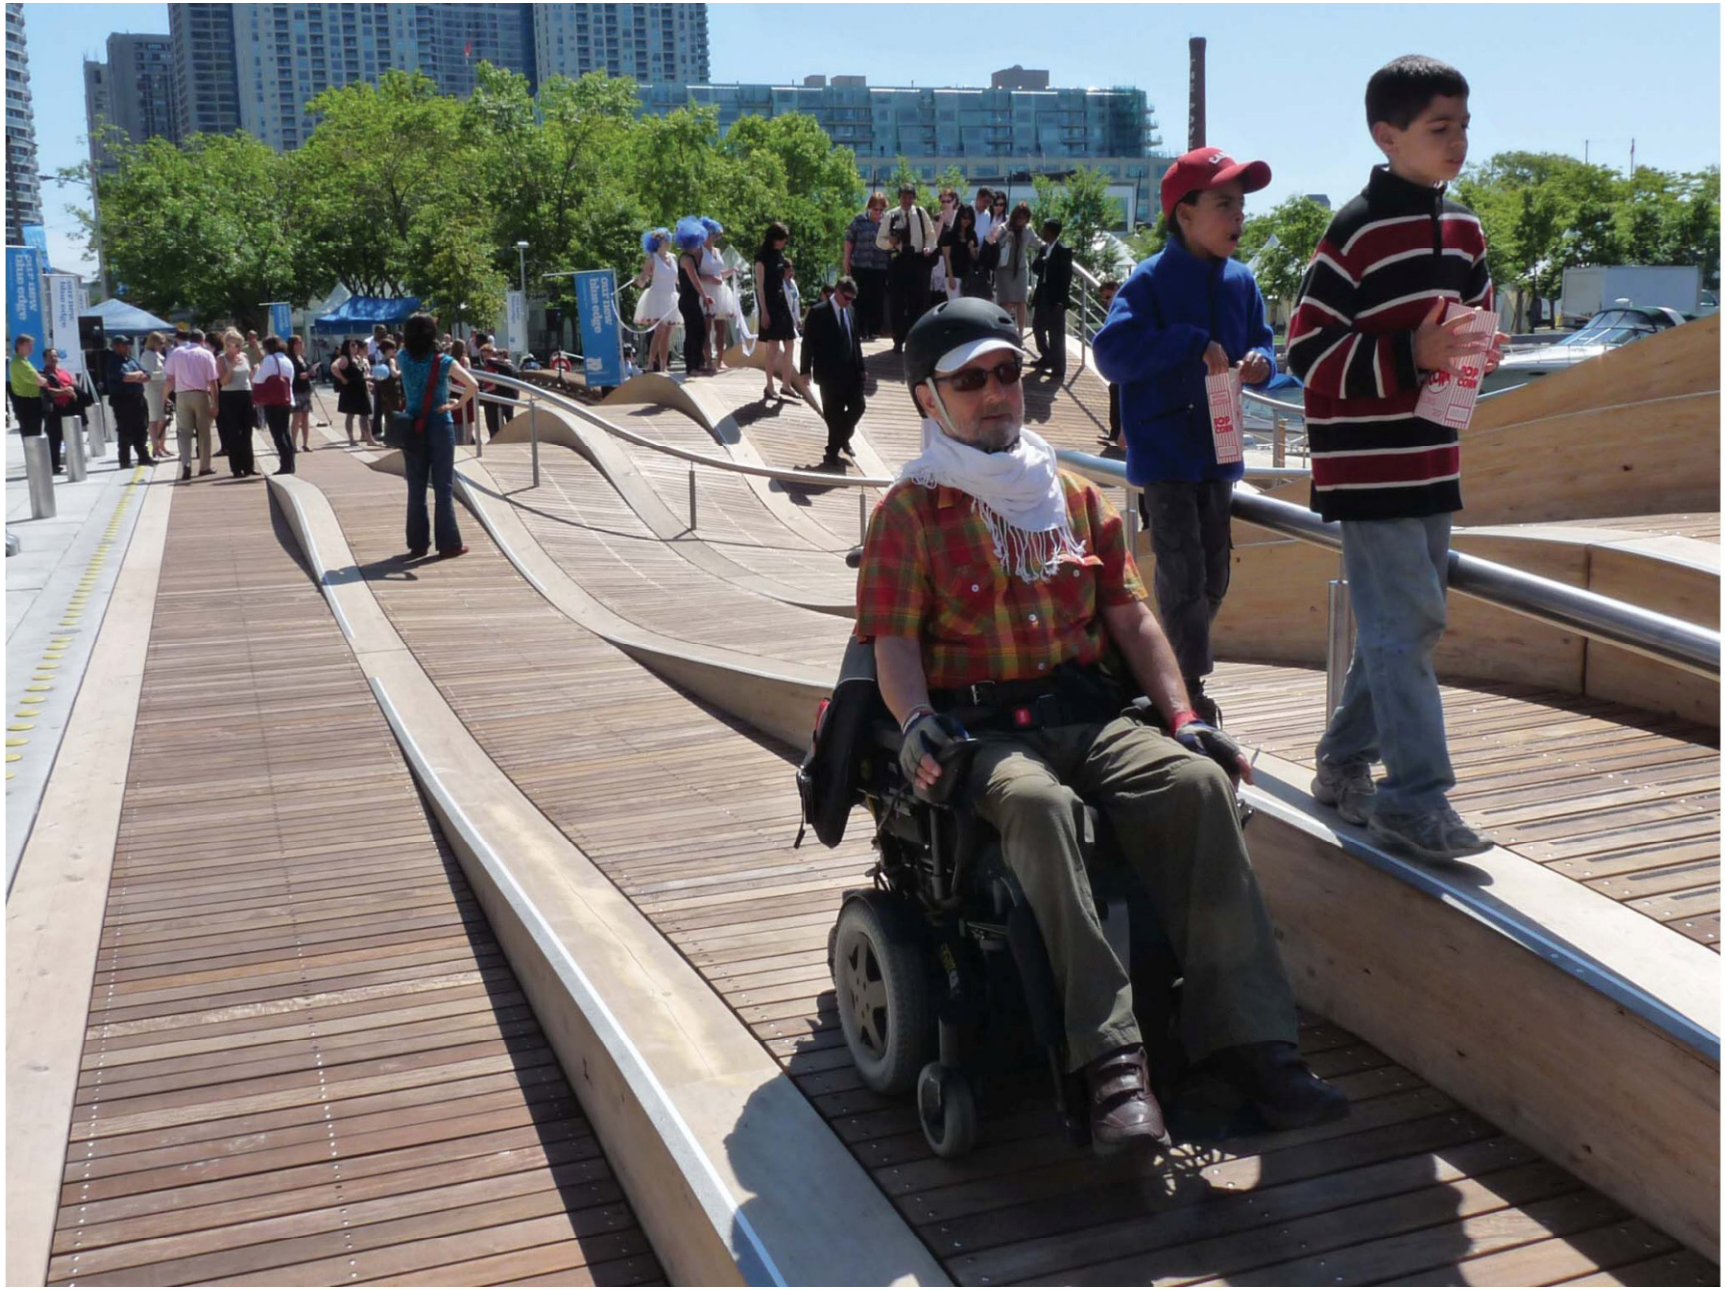
Accessible routes will provide barrier-free access to all aspects of the waterfront experience.

'Breaking through barriers' will enhance ease of movement and participation for all visitors by making the waterfront's facilities, programs, site information and services accessible.



1. Colour and Texture Contrasts

2. Physical Ease of Movement, Paths of Travel, Physical Access

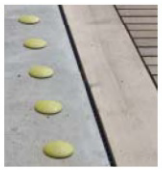
1. Colour and Texture Contrasts

Colour and textual contrasts, plus tactile cues, help people who are blind or visually impaired find their way through their environment. Design and maintenance must be considered from a way finding perspective of people who have vision challenges.

The standard minimum colour/brightness contrast recommended between 60/40% - 70%/30% (Ideal).

After extensive testing for a unique outdoor public space application on the Wavedecks, Waterfront Toronto determined that a 62% contrast was registered by using a white strip to mark the end of steps on the Wavedecks (below). Note: the ideal recommended 70/30 contrast would not withstand the outdoor elements, since the black and dark grey strips would not continue to register against the fading wood and would eventually look like another joint in the deck/a shadow line.

Tactile clues that can be felt underfoot or detected by a person using a cane, assist people who are blind or visually impaired find their way through an environment and have been used extensively in the waterfront development. Examples include tactile warning domes, tactile alert strips, tactile handrail applications and different textures (below).



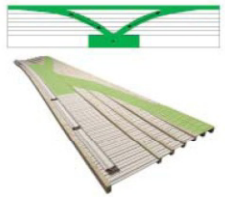
(left) Tactile dots demarcate edge of deck area (above) A contrast of paving textures on the edge of the pedestrian path in Nantes, France

2. Physical Ease of Movement, Paths of Travel, and Physical Access

The integration of access into waterfront design provides safe ease of movement, not only for people with physical challenges but for all visitors. Many barriers can be eliminated by awareness and planning early in the design process.

Integrate arrival and departure areas into the three waterfront systems (Primary Waterfront, Urban Waterfront, Floating Waterfront). Provide safe and spacious passenger loading zones in drop off areas, close to key popular spaces. Without these, the logistics and potential long distances to planned destination points could prevent many people with disabilities from visiting the waterfront. Designated parking spaces are essential for those who travel by car.

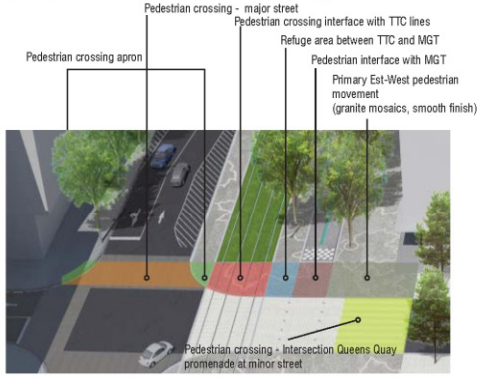
The design of the Wavedecks demonstrates the integration of accessibility through ramping, anti-slip surfaces and colour and texture contrast (below).



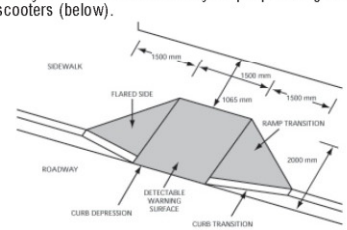
(above) Various cues provide information, guidance for safe movement, awareness, and anti-slip surface

(above) Access points by both stair and ramp (5%) between the water's edge promenade and boardwalk facilitate easy movement between the two routes.

Walking zones provide accessible pathways to the water and texture differentiation for way finding guidance.
(below) Queens Quay Boulevard Paving Strategy



Design intersections for independent safe crossing.
- For a person using wheelchair or for those who have slower movement capabilities, there is a medium waiting space, or refuge, for pedestrian crossing.
- Tactile warning surfaces at curb ramps indicate to people who are blind or have vision loss, when they are approaching an intersection. Audible traffic/pedestrian signals alert people when it is safe to cross.
- Cut away curbs make access easy for people using wheelchairs and scooters (below).



3. Signage

4. Amenities and Details

5. Maintenance and Operations

6. Other Opportunities for Innovative Participation

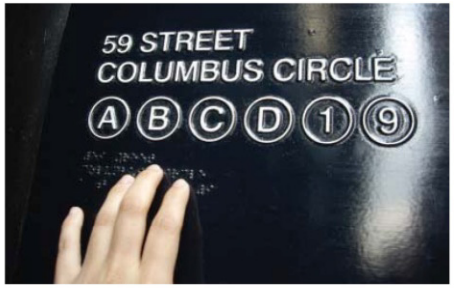
7. Communicating Access

3. Signage

Signage to assist those who are blind, visually impaired, deaf, have hearing loss or physical challenges is critical for safe, independent and easy movement through the waterfront environment.

The following accommodations can be integrated into the way finding plan throughout the waterfront:
- Braille signage
- Tactile signs that have slightly raised lettering and graphics above the surface of the sign. The recommended contrast between the sign lettering and its background should be a minimum of 70%.
- Large scale tactile maps that give information about the layout.
- Hand held tactile maps that provide specific route information.

Both sizes should have a Braille overlay.



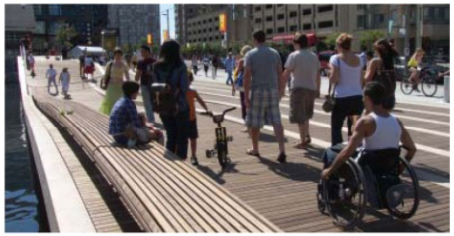
(above) Integrated Braille and raised letter signage, New York City

- Surface texture changes to alert people they should cross with care.
- A legend explaining the meaning of symbols and cues used along the waterfront.
- Pre-recorded instructions that can be downloaded off the web site to describe routes, event locations and alternate routes, should structures limit access.
- Audio information in a written format for those who are deaf or have hearing loss.

4. Amenities and Details

The following amenities are important to contributing to a positive total experience for the visitor with a disability and must be considered in the planning and design phase:

- Locate benches and seats throughout the public realm to provide areas of rest for those who tire easily.
- Include a tactile change in the area surrounding the bench to indicate to a person that a bench is near by.
- Provide accessible drinking fountains
- Ensure public washrooms follow City of Toronto Accessibility Design Guidelines
- Provide easily accessible waste receptacles and recycling bins



5. Maintenance and Operations

Accessibility includes not only the design elements, but the maintenance of spaces for ease of use and safety, not only for persons with disabilities, but for all visitors.

- Include procedures to ensure change of season activities are carried out. For example, remind maintenance staff that chains around decks have to be removed in the spring, after winter closure, so people with disabilities can gain access.
- Keep pathways clear of snow, ice, wet leaves, twigs and debris, at all times, through regular maintenance. This is critical for safety and the ease of access for people with disabilities.
- Use sand instead of salt because salt is an irritant to service dogs' paws.
- Check paths of travel regularly for uneven surfaces and damage. Complete any required repairs promptly.

6. Other Opportunities for Innovative Participation

On-going design creativity will continue to offer unique experiences to those with different challenges. Exploring best practices to find innovative, yet realistic solutions to breaking through barriers will present opportunities for participation by all people at the waterfront. Potential initiatives include:

- Accessible parks and parkettes with accessible picnic tables
- Tactile displays for interpretation
- A "Rocky Canadian Shield Area" dream that will bring visitors into natural environments (like the wilderness of a northern lakeside) in an accessible setting so they can interact with their surroundings.
- Doggy relief areas for service animals throughout the waterfront.
- Enhanced communication through innovative signage, bar code linkages to cell phones, blackberrys and I pods and leading edge technology for location identification.

7. Communicating Access

The waterfront experience begins with information about the facilities, site locations, programs and services. Often, extensive planning is the first step in any outing for a visitor with a disability, so it is essential that access is integrated into the creating, providing and receiving of information and communication materials and processes. Consider:

- Creating plain language material that promotes dignity,
- Making existing and new web sites and content accessible
- Having information available in alternate formats (eg. Braille, large print, written material for information that is audio, descriptive video)
- Planning inclusive stakeholder meetings for active participation.

Public art will reinforce the public realm with strategic points of dramatic impact.

World-class contemporary art installations within a coherent frame will contribute to both the image and experience of the waterfront.

'Just got a bargain!'

Queens Quay South-side Linear Art/Infrastructure Installation
Combined Public Art/Infrastructure integration potential
Important linear route across the Central Waterfront
Transformation of TTC Elements (eg. portal canopy, pole supports for transit lines) using camouflage/stealth infrastructure, link to context
Potential for Martin Goodman Trail surface to be treated with surface installation (for example, painted by native artist)
York Off-Ramp Gateway / Monument to Simcoe
Combined Public Art/Heritage integration potential
Important gateway to Central Waterfront from the downtown
Transformation of Off-Ramp to Elevated Botanical Ramp
Potential art/monument to Elizabeth Simcoe
Queens Quay South-side Linear Art/Infrastructure Installation
Combined Public Art/Infrastructure integration potential
TTC substation integrated as structural art installation, monument at foot of Jarvis as complement to existing loading/unloading crane structures
Possible opportunity for interpretation of processes of sugar factory, shipping, etc.
Temporary Art during Construction Phases
Potential for public art installations within the construction process (hoarding, etc.) that transcend the typical building site into a special event or experience of the place
This has public relations benefits in communicating the construction process to a broad public in a memorable and interactive way.
1
West 'Bookend' - Canada Malting Silos
Combined Public Art/Heritage integration potential
Important 'bookend' frame for Central Waterfront
Lighting/Projection Installation on industrial architecture
3
Central West Public Art Installation
Significant public art feature by a
Canadian aboriginal artist
Destination for art in close proximity to
Cultural Village at York Quay and Powerplant Art Gallery
4
2A
2A
5
Foot of Yonge/ Ferry Terminal Installation
Important gateway to Waterfront from the downtown
Commemorating the importance of the longest street in the world
2
2B
2
6
East 'Bookend' - Victory Soy Silos
Combined Public Art/Heritage integration potential
Important 'bookend' frame for Central Waterfront at the East
Lighting/Projection Installation on industrial architecture

1.
West 'Bookend' - Canada Malting Silos
Combined Public Art/Heritage integration potential
Important 'bookend' frame for Central Waterfront
Lighting/Projection Installation on industrial architecture that may be a temporary installation that preceeds future adaptive re-use of the structures

(top) Artist Olafur Eliasson's "Waterfalls" art installation at the Brooklyn Bridge crossing the East River in New York, 2008.
(above) Existing Malting silo structures - iconic form

2.
Queens Quay South-Side Linear Art/Infrastructure Installation
Combined Public Art/Infrastructure integration potential within an mportant linear route across the Central Waterfront. The continuity of art as infrastructure along Queens Quay has the potential to establish a powerful liinear sequence where everyday transit infrastructure is transformed and elevated to public art: Camouflage/Stealth Infrastructure, link to context, colours of urban environment, for example, transit support poles holding TTC streetcar lines. Integration of art with necessary infrastructure, for example, TTC substation structures related to transit (at Jarvis Slip)

(top) Timber portal canopies for TTC designed as a coherent part of the Wavedeck family
(above left) Infrastructure camouflage within context? Reference: Windy Hill, Australia
(above right) The spectacle of the sugar boats loading/unloading at the foot of Jarvis should be highlighted

3.
Central West Public Art Installation
Significant public art feature by a
Canadian aboriginal artist
Destination for art in close proximity to Cultural Village at York Quay and Powerplant Art Gallery
Major atraction with high drawing power

(top) Anish Kapoor's 'Cloud Gate' in Chicago
(above) Canadian aboriginal art should be the focus of this installation, executed at a large-scale integrated in the public realm

4.
York Off-Ramp Gateway / Monument to Simcoe
Combined Public Art/Heritage integration potential
Important gateway to Central Waterfront from the downtown
Transformation of Off-Ramp to Elevated Botanical Ramp
Potential art/monument to Elizabeth Simcoe

(top) Wooden statue of Elizabeth Simcoe (example)

5.
Foot of Yonge/ Ferry Terminal Installation
Important gateway to Central Waterfront from the downtown commemorating the importance of the longest street in the world
Potential glass/mosaic art installation as part of roof structure in proposed Metropolitan Boathouse/Ferry Terminal or other installation related to the Ferry Docks and public experience

(top) Coloured roof of the Santa Catarina Market, Barcelona (EMBT Architects)
(above) Iconic sign of the Pike Place Market, Seattle

6.
East 'Bookend' - Victory Soy Silos
Combined Public Art/Heritage integration potential
Important 'bookend' frame for Central Waterfront at the East
Lighting/Projection Installation on industrial architecture

(top) The 'Image Mill' video projection installation to celebrate Quebec City's 400th year involved dazzling projections on industrial buildings and structures in the harbour.
(above) Existing Vicotry Soya silos

7.
Temporary Art during Construction Phases
Potential for public art installations within the construction process (painting, lighting, hoarding, installations etc.) that transcend the typical building site into a special event or experience of the place. This can publicly communicate aspects of the construction process to a broad public in a memorable and interactive way.
The revitalization process along the Central Waterfront will occur over time in various phases. During extended construction periods, the typical 'blind spot' created in the cityscape can instead serve to get people thinking about the future of the city and its waterfront.

(top) Block of houses painted blue, Rotterdam (Floretijn Hofman)
(above) Construction hoarding in Tokyo by architects Klein Dytham creates a green screen, where "fabric panels with graphic patterns and advertisements alternate with soil-filled burlap pockets that hold trailing plants"- a temporary green living wall.

The waterfront will develop within the context of our built heritage and oral histories.

Expressions of the often intangible aspects of heritage on the waterfront will invite a broad public to explore the history of the place.

1910

1913

1918

1929

With the dynamic media of video projection, the public's imagination can be stimulated to interpret the city's rich heritage at the lake. The mixture of projected video images upon the surfaces of existing industrial remanants would create a poignant mix of traces of history and concrete, living artefacts.
A nightime spectacle which inflects new life into one of the waterfront's greatest artefacts by highlighting and activating the silo's as features of the public realm.

Strategy Framework

1. **Connecting the City to the Waterfront**
   Interpreting the Changing Shoreline
2. **The Heritage Dockwall**
   Narratives of the Waterfront
3. **The Foot of Yonge**
4. **Monumental Book-ends**
   Celebrating the industrial past

The investments in the public realm should be preserved and protected.

A robust and beautifully detailed public realm can create a legacy for the city. Maintenance and operations are essential to encourage people to enjoy the waterfront to the fullest and protect the capital investment.

Type	*Materials / Estimated Life Cycle*	*Monitoring / Inspection*	*Regular Maintenance*	*Special Winter Maintenance Requirements*
Timber Structures				
WaveDecks	Steel piles, Steel primary beams, Coastal Yellow Cedar glulam secondary beams, Ipe hardwood deck boards Designed for 50 year life-cycle	Check underdeck lighting for operation and vandalism Inspect bench for vandalism - replace hardwood slats if necessary Monitor metal finishes for vandalism	Seasonal powerwash of deck surface, vaccuum debris from corners of slip when accumulation occurs (seasonally) Clean underdeck lighting (if necessary) 1x per year Replace LED lights 1x per 20 years	Install chain and winter closure sign Settings of LED lights to winter lighting intensity (programmable)
Timber Footbridges	Coastal Yellow Cedar glulam primary and secondary beams, Ipe hardwood deck boards, Yellow Cedar paddle handrail terminus, stainless steel leaf node cover, LED handrail and under-bridge lighting Designed for 75 year life-cycle	Inspect timber column nodes/connections	Seasonal powerwash of deck surface Clean LED lighting (if necessary) 1x per year Replace LED lights 1x per 20 years	If City keeps open during winter season, snowclearing and de-icing (specify type) is required. Inspection of timber connections (steel plates) necessary after winter season.
Wooden Boardwalks	Steel piles, concrete understructure, hardwood (Ipe) deck boards, galvanized steel toerail and mooring bollards, LED lighting recessed in dockwall Designed for 50 year life-cycle	Inspect deck boards for vandalism - replace hardwood planks if necessary Check LED lighting for operation and vandalism	Seasonal powerwash of deck surface (as necessary) 1x per year, vaccuum/sweep debris from underneath water's edge bench when accumulation occurs (weekly/monthly), replace LED lights 1x per 20 years	If City keeps open during winter season, snowclearing and de-icing (specify type) is required. Inspection of understructure connections (furring strip) for deterioration after winter season.
Hardscapes				
Granite Mosaic Paving	Granite 100x100x80mm paver 100+ year life-cycle	Monitor for differential settlement	Seasonal powerwash of mosaic paving surface 4x per year, weeding of the granite mosaic areas as needed	Avoid salting. Use brushes to clear snow from mosaic areas rather than blade
Granite Curbstones	Granite 300mm wide curbstone 100+ year life-cycle	N/A	N/A	N/A
Paleo-Tec Concrete Unit Paving	Precast Concrete 140x220x100mm paver 20 year life-cycle	Monitor for differential settlement	Clear litter and debris	N/A
MGT asphalt and graphic markings	Asphalt surface with inlaid thermoplastic markings 12-15 year life-cycle	Inspect for peeling or damaged thermoplastic markings	Clear litter and debris	Clear ice and snow, avoid salting due to proximity of street tree allée
Furnishings				
Benches	Hardwood (Ipe) bench slats on cast aluminum support structure 50 year life-cycle	Inspect hardwood (Ipe) bench slats for vandalism – replace hardwood slats if necessary Inspect cast aluminum suports for signs of vandalism – repair, paint touch-up as needed	Seasonal powerwash of bench surface (as necessary) 1x per year, sweep debris from underneath benches as needed	N/A
Light Mast	Timber (Coastal Yellow Cedar glulam) mast, cast aluminum light fixtures (Olivio), cast aluminum davit arm supports and bark-textured footing 100 year life-cycle	Inspect for signs of vandalism – repair as required	N/A	N/A
Signage	Porcelain enamel signplate, Coastal Yellow Cedar glulam base, Steel footing with anticipated 25 year life-cycle	Inspect	Inspect	N/A
Plantings				
Water's Edge Promenade double-row Native Trees	Acer (Maple)	Monitor for pest / disease infestation, 3x yr (spring, summer, fall)	Regular regime of horticultural practice	Deep spot waterring in spring to flush out salt from winter streets
Queens Quay Promenade double-row Native Trees	Species TBD	Monitor for pest / disease infestation, 3x yr (spring, summer, fall)	Regular regime of horticultural practice	Deep spot waterring in spring to flush out salt from winter streets
Inner District Street Plantings	Varies (Native species)	Monitor for pest / disease infestation, 3x yr (spring, summer, fall)	Regular regime of horticultural practice	Deep spot waterring in spring to flush out salt from winter streets
TTC Trackbed Grass	Species TBD	Inspect for signs of spotty or thinned growth, compaction, stress – provide spot fertilizing, deep spot waterings, aeration, or over-seeding of thin or bare areas as required	Regular mowing and trimming 3-4x per month Irrigation (Regular, on-going); seasonal fertilization to promote strong root growth and a thick stand of turf; aeration 2x per year (spring and fall); lawn thatching 1x per year (spring or fall) followed by a thin top dressing of soil which will encourage new root growth	Deep waterring in spring to flush out salt from winter streets
Silva Cells	Fiberglass reinforced, chemically-coupled, impact modified polypropylene frames and a deck with galvanized steel tubes. Manufacturer warranty for 20 years, however, life-cycle is expected to be for 100+.	Monitor silva cells following repair of underground services	N/A	N/A

The public realm will be animated by diverse, year-round programming.

Waterfront public spaces will provide the flexible setting to host the evolving culture of activities and programs that reflect the diversity of contemporary Toronto.
