NOT LOCATED NEAR TERRESTRIAL HABITAT OF ANY SIGNIFICANCE.	NOT LOCATED NEAR TERRESTRIAL HABITAT OF ANY SIGNIFICANCE.	NOT NEAR TERRESTRIAL HABITAT OF ANY SIGNIFICANCE.
	AQUATIC HABITAT	NO AQUATIC HABITAT OF ANY SIGNIFICANCE, HOWEVER DISCHARGING UNTREATED STORMWATER ULTIMATELY TO THE INNER HARBOR MAY IMPAIR AQUATIC HABITAT CONDITIONS.	NOT LOCATED NEAR AQUATIC HABITATS OF ANY SIGNIFICANCE. HOWEVER TREATING STORMWATER THAT ULTIMATELY REACHES THE INNER HARBOR MAY IMPROVE AQUATIC HABITAT CONDITIONS.	NOT LOCATED NEAR AQUATIC HABITATS OF ANY SIGNIFICANCE. HOWEVER TREATING STORMWATER THAT ULTIMATELY REACHES THE INNER HARBOR MAY IMPROVE AQUATIC HABITAT CONDITIONS.	NOT LOCATED NEAR AQUATIC HABITATS OF ANY SIGNIFICANCE. HOWEVER TREATING STORMWATER THAT ULTIMATELY REACHES THE INNER HARBOR MAY IMPROVE AQUATIC HABITAT CONDITIONS.	NOT LOCATED NEAR AQUATIC HABITATS OF ANY SIGNIFICANCE. HOWEVER TREATING STORMWATER THAT ULTIMATELY REACHES THE INNER HARBOR MAY IMPROVE AQUATIC HABITAT CONDITIONS.
	WATER QUALITY / QUANTITY	PROVIDES NO IMPROVEMENT TO STORMWATER QUALITY.	IMPROVES THE QUALITY OF STORMWATER DISCHARGE, WITH LIKELY THE SECOND BEST OVERALL RESULTS.	IMPROVES THE QUALITY OF STORMWATER DISCHARGE, WITH LIKELY THE FOURTH BEST OVERALL RESULTS.	IMPROVES THE QUALITY OF STORMWATER DISCHARGE, WITH LIKELY THE THIRD BEST OVERALL RESULTS.	IMPROVES THE QUALITY OF STORMWATER DISCHARGE, WITH LIKELY THE BEST OVERALL RESULT.
	AIR QUALITY	NO IMPACT TO AIR QUALITY.	NO IMPACT TO AIR QUALITY.	NO IMPACT TO AIR QUALITY.	NO IMPACT TO AIR QUALITY.	NO IMPACT TO AIR QUALITY.
	SOIL AND GROUNDWATER	THERE IS A POTENTIAL TO ENCOUNTER SOIL AND/OR GROUNDWATER CONTAMINATION. SOIL AND GROUNDWATER MANAGEMENT PLANS WILL BE REQUIRED FOR ALL ALTERNATIVES.	THERE IS A POTENTIAL TO ENCOUNTER SOIL AND/OR GROUNDWATER CONTAMINATION. SOIL AND GROUNDWATER MANAGEMENT PLANS WILL BE REQUIRED FOR ALL ALTERNATIVES.	THERE IS A POTENTIAL TO ENCOUNTER SOIL AND/OR GROUNDWATER CONTAMINATION. SOIL AND GROUNDWATER MANAGEMENT PLANS WILL BE REQUIRED FOR ALL ALTERNATIVES.	THERE IS A POTENTIAL TO ENCOUNTER SOIL AND/OR GROUNDWATER CONTAMINATION. SOIL AND GROUNDWATER MANAGEMENT PLANS WILL BE REQUIRED FOR ALL ALTERNATIVES.	THERE IS A POTENTIAL TO ENCOUNTER SOIL AND/OR GROUNDWATER CONTAMINATION. SOIL AND GROUNDWATER MANAGEMENT PLANS WILL BE REQUIRED FOR ALL ALTERNATIVES.
SOCIAL AND ECONOMIC	CULTURAL HERITAGE RESOURCES	NO CULTURAL HERITAGE RESOURCES ARE AFFECTED	NO CULTURAL HERITAGE RESOURCES ARE AFFECTED.	NO CULTURAL HERITAGE RESOURCES ARE AFFECTED.	NO CULTURAL HERITAGE RESOURCES ARE AFFECTED.	NO CULTURAL HERITAGE RESOURCES ARE AFFECTED.
	IMPACTS TO BUSINESSES	NO BUSINESSES WILL BE IMPACTED.	NO BUSINESSES WILL BE IMPACTED.	NO BUSINESSES WILL BE IMPACTED.	NO BUSINESSES WILL BE IMPACTED.	NO BUSINESSES WILL BE IMPACTED.
	IMPACTS TO PRIVATE PROPERTY	ALL STORMWATER FACILITIES WILL BE LOCATED ON PUBLICLY OWNED LANDS.	ALL STORMWATER FACILITIES WILL BE LOCATED ON PUBLICLY OWNED LANDS.	ALL STORMWATER FACILITIES WILL BE LOCATED ON PUBLICLY OWNED LANDS.	ALL STORMWATER FACILITIES WILL BE LOCATED ON PUBLICLY OWNED LANDS.	ALL STORMWATER FACILITIES WILL BE LOCATED ON PUBLICLY OWNED LANDS.
	NOISE AND VIBRATION	NO NOISE OR VIBRATION IMPACTS ARE EXPECTED.	NO NOISE OR VIBRATION IMPACTS ARE EXPECTED.	NO NOISE OR VIBRATION IMPACTS ARE EXPECTED.	NO NOISE OR VIBRATION IMPACTS ARE EXPECTED.	NO NOISE OR VIBRATION IMPACTS ARE EXPECTED.
	EMPLOYMENT	NO IMPACTS TO EMPLOYMENT.	NO IMPACTS TO EMPLOYMENT.	NO IMPACTS TO EMPLOYMENT.	NO IMPACTS TO EMPLOYMENT.	NO IMPACTS TO EMPLOYMENT.
	RECREATION	NO IMPACTS TO RECREATION.	NO IMPACTS TO RECREATION IN THE WEST DON LANDS, AND LIMITED RECREATIONAL VALUE ASSOCIATED WITH ANY OPEN STORMWATER MANAGEMENT PONDS. IMPROVED WATER QUALITY IN THE INNER HARBOUR IS BENEFICIAL TO RECREATION.	NO IMPACTS TO RECREATION IN THE WEST DON LANDS. IMPROVED WATER QUALITY IN THE INNER HARBOUR IS BENEFICIAL TO RECREATION.	NO IMPACTS TO RECREATION IN THE WEST DON LANDS. IMPROVED WATER QUALITY IN THE INNER HARBOUR IS BENEFICIAL TO RECREATION.	NO IMPACTS TO RECREATION IN THE WEST DON LANDS. IMPROVED WATER QUALITY IN THE INNER HARBOUR IS BENEFICIAL TO RECREATION. THIS OPTION HAS THE HIGHEST OVERALL PERFORMANCE.
OPPORTUNITY FOR REVITALIZATION	ABILITY TO SUPPORT THE DEVELOPMENT OBJECTIVES OF THE PRECINCT PLAN	NO PHYSICAL IMPACT TO REDEVELOPMENT PLAN BUT WOULD NOT MEET MUNICIPAL AND PROVINCIAL OBJECTIVES FOR STORMWATER QUALITY.	STORMWATER PONDS ARE LAND-INTENSIVE AND WOULD BE LESS SUPPORTIVE OF THE CONTEMPLATED LAND USES. STORMWATER PONDS MAY NOT BE COMPATIBLE WITH CERTAIN ADJACENT LAND USES.	NO PHYSICAL IMPACT TO REDEVELOPMENT PLAN SINCE FACILITIES ARE NOT LAND INTENSIVE AND COULD BE LOCATED WITHIN ROAD ALLOWANCES, UNDER (PUBLIC) OPEN SPACES OR BUILDINGS DEPENDING ON SITE LOCATIONS AND MUNICIPAL REQUIREMENTS.	THE SETTLING TANK NEEDS TO BE LOCATED OUTSIDE THE ROAD ALLOWANCE AND IS MORE LAND INTENSIVE THAN THE OIL / GRIT SEPARATOR. HOWEVER THERE MAY BE OPPORTUNITIES TO LOCATE THE SETTLING TANK UNDER A (PUBLIC) PARKING LOT OR PARKING STRUCTURES.	NO PHYSICAL IMPACT TO REDEVELOPMENT PLAN SINCE FACILITIES ARE NOT LAND INTENSIVE AND COULD BE LOCATED WITHIN ROAD ALLOWANCES, UNDER (PUBLIC) OPEN SPACES OR BUILDINGS DEPENDING ON SITE LOCATIONS AND MUNICIPAL REQUIREMENTS.
	ABILITY TO SUPPORT THE URBAN DESIGN OBJECTIVES OF THE PRECINCT PLAN	NO IMPACT TO URBAN DESIGN.	PONDS ARE LAND INTENSIVE AND MAY NOT BE COMPATIBLE WITH ADJACENT BUILT FORM.	NO IMPACT TO URBAN DESIGN.	NO IMPACT TO URBAN DESIGN.	NO IMPACT TO URBAN DESIGN.
	ABILITY TO SUPPORT WATERFRONT WIDE REVITALIZATION	WOULD NOT MEET MUNICIPAL AND PROVINCIAL OBJECTIVES FOR STORMWATER QUALITY.	SUPPORTS THE IMPROVEMENTS TO WATER QUALITY.	SUPPORTS THE IMPROVEMENTS TO WATER QUALITY.	SUPPORTS THE IMPROVEMENTS TO WATER QUALITY.	SUPPORTS THE IMPROVEMENTS TO WATER QUALITY.
COST EFFECTIVENESS	CAPITAL COST OF IMPROVEMENTS	NO CAPITAL COST.	MODERATE CAPITAL COST.	LOW CAPITAL COST.	HIGHEST CAPITAL COST.	HIGH CAPITAL COST.
	MAINTENANCE COSTS	MINIMAL MAINTENANCE COST.	MODERATE MAINTENANCE COST.	MODERATE MAINTENANCE COST.	MODERATE MAINTENANCE COST.	HIGH MAINTENANCE COST.
TECHNICAL CONSIDERATIONS	LEVEL OF STORMWATER TREATMENT	NO TREATMENT PROVIDED.	REMOVAL OF FLOATING MATTERS AND REDUCTION OF SUSPENDED SOLIDS PROVIDED.	REMOVAL OF FLOATING MATTER AND REDUCTION OF SUSPENDED SOLIDS PROVIDED.	REMOVAL OF FLOATING MATTER AND REDUCTION OF SUSPENDED SOLIDS PROVIDED.	REMOVAL OF FLOATING MATTER AND REDUCTIONS OF SUSPENDED SOLIDS AS WELL AS BACTERIA AND VIRUSES PROVIDED. THIS OPTION HAS THE HIGHEST OVERALL PERFORMANCE.
	POTENTIAL TO MEET OBJECTIVES OF THE CITY OF TORONTO WET WEATHER FLOW MANAGEMENT MASTER PLAN	NO TREATMENT PROVIDED.	NO DISINFECTION PROVIDED.	NO DISINFECTION PROVIDED.	NO DISINFECTION PROVIDED.	DISINFECTION PROVIDES REDUCTION IN CONCENTRATION OF BACTERIA AND VIRUSES.

		ALTERNATIVE DESIGNS - RE-ALIGNMENT OF BAYVIEW AVENUE, RICHMOND/ADELAIDE RAMPS TO MILL ST.		
	IMPROVEMENT STRATEGY	DESIGN ALTERNATIVE A	DESIGN ALTERNATIVE B	DESIGN ALTERNATIVE C
CRITERIA		Retain Existing Alignment and Connections to Eastern Ave. and Front St.	Retain Existing Alignment and Connect Bayview to Mill St.	Re-Align Bayview to the West of the Landform
TRANSPORTATION SERVICE	ROAD SAFETY	Entire alignment subject to flooding.	Entire alignment subject to flooding.	Mostly outside the floodplain.
	ABILITY TO SATISFY TRAVEL DEMAND OF LOCAL AND THROUGH TRAFFIC	Through traffic dispersed along Eastern Ave., Front St. and Mill St.	Through traffic would be concentrated on one east-west road, conflicting with local traffic; Traffic destined for Eastern Ave. or Front St. may divert to River St.	Through traffic would be dispersed along Eastern Ave., Front St. and Mill St.
	ACCESS	Adequate access will be provided for all future development on abutting properties. Some adjustments to access may be required for remaining properties.	Adequate access will be provided for all future development on abutting properties. Some adjustments to access may be required for remaining properties.	Adequate access will be provided for all future development on abutting properties. Some adjustments to access may be required for remaining properties.
	IMPACTS TO TRAFFIC OPERATIONS	No significant impact anticipated.	No significant impact anticipated.	No significant impact anticipated.
	ABILITY TO ACCOMMODATE/ENCOURAGE TRANSIT	No impact on existing or proposed services.	No impact on existing or proposed services.	No impact on existing or proposed services.
	SERVICE TO BICYCLISTS	New bicycle route planned for River St. extension/Bayview Ave.	New bicycle route planned for River St. extension/Bayview Ave.	New bicycle route planned for River St. extension/Bayview Ave.
	SERVICE TO PEDESTRIANS	Sidewalks will be provided; however, Bayview Ave. is remote from proposed development in the WDL.	Sidewalks will be provided; however, Bayview Ave. is remote from proposed development in the WDL.	Sidewalks will be provided. New alignment is close to WDL development as well as open space.
	FACILITATION OF GOODS MOVEMENT	Direct connections to/from Bayview Ave., Front St., and Eastern Ave.	Some commercial vehicles may divert from Bayview Ave. to River St. to get to Eastern Ave. or Front St.	Direct connections to/from Bayview Ave., Front St., and Eastern Ave.
	SUPPORT POLICE AND EMERGENCY SERVICE OPERATIONS	Minimal impact on existing services expected.	Minimal impact on existing services expected.	Minimal impact on existing services expected.
NATURAL ENVIRONMENT	TERRESTRIAL HABITAT	No terrestrial habitat of any significance.	No terrestrial habitat of any significance.	No terrestrial habitat of any significance.
	VEGETATION	No vegetation habitat of any significance.	No vegetation habitat of any significance.	No vegetation habitat of any significance.
	AQUATIC HABITAT	No existing bodies of water.	No existing bodies of water.	No existing bodies of water.
	AIR QUALITY	No new road capacity. Roads not located near any sensitive receptors.	Increases road capacity. Roads not located near any sensitive receptors.	No new road capacity. Roads not located near any sensitive receptors.
	SOIL AND GROUNDWATER	There is a potential to encounter soil and/or groundwater contamination. Soil and groundwater management plans will be required for all alternatives.	There is a potential to encounter soil and/or groundwater contamination. Soil and groundwater management plans will be required for all alternatives.	There is a potential to encounter soil and/or groundwater contamination. Soil and groundwater management plans will be required for all alternatives.
SOCIAL AND ECONOMIC	NOISE AND VIBRATION	Noise generators will not be moved closer to sensitive receptors.	Noise generators will not be moved closer to sensitive receptors.	Noise generators will not be moved closer to sensitive receptors.
	BUSINESSES	Five businesses could be affected by property requirements. Adjustments to access of remaining businesses may be required.	Five businesses could be affected by property requirements. Adjustments to access of remaining businesses may be required.	Seven businesses could be affected by property requirements. Adjustments to access of remaining businesses may be required.
	EMPLOYMENT	Potential loss of employment created by impacts on several businesses.	Potential loss of employment created by impacts on several businesses.	Potential loss of employment created by impacts on several businesses.
	CULTURAL AND HERITAGE RESOURCES	No cultural or heritage resources affected.	No cultural or heritage resources affected.	No cultural or heritage resources affected.
	IMPACTS ON PRIVATE PROPERTY	No private property affected.	No private property affected.	No private property affected.
	RECREATION	Carves up area at east end of Precint allocated for open space.	Facilitates creation of open open space at east end of Precinct.	Facilitates creation of one large area of open space at east end of Precinct.
OPPORTUNITY FOR REVITALIZATION	ABILITY TO SUPPORT THE DEVELOPMENT OBJECTIVES OF THE PRECINCT PLAN	Re-allgnment supports development objectives.	Re-allgnment supports development objectives.	Re-allgnment supports development objectives.
	ABILITY TO MEET THE URBAN DESIGN OBJECTIVES OF THE PRECINCT PLAN	Connections to Eastern Ave. and Front St. carve up the large area of open space at the east end of the Precinct.	Connection to Mill St. carves up the large area of open space at the east end of the Precinct.	Does not intrude into open space. Separates open space from built development.
	ABILITY TO SUPPORT THE POLICIES OF THE CENTRAL WATERFRONT SECONDARY PLAN	Links waterfront with areas to the north.	Links waterfront with areas to the north.	Links waterfront with areas to the north.
COST EFFECTIVENESS	CAPITAL COST OF IMPROVEMENTS (Including private property costs)	Construction/reconstruction of 640m of road.	Construction/reconstruction of 770m of road.	Construction/reconstruction of 480m of road.
	MAINTENANCE COST	640m of roads to maintain.	770m of roads to maintain.	480m of roads to maintain.

Exhibit 9-5
Potential Effects and Environmental Management Practices for Transportation, Stormwater, Wastewater and Sanitary Systems

Environmental Sub-Components	Potential Effects based on Potential Environmental Interactions	Potential Environmental Management Practices
Terrestrial Species and Habitat	• Damage or reduction in habitat due to loss of vegetation during site clearing associated with construction activities • Temporary reduction in migratory bird habitat due to loss of vegetation during construction activities • Disturbance to adjacent habitat by construction activities • Creation of new habitat or linkages, using native species, as a result of landscaping and enhancement opportunities. Habitat and linkages may be created by increase in vegetation associated with replanting for landscaping and streetscaping • Lighting impacts on wildlife • Improved conditions for species and habitat through site remediation	• Identify migratory bird habitat areas, protect areas during key migration periods • Ensure all construction material is handled and stored on-site to avoid effects to border areas • Re-establish vegetation at or near the site using ecological restoration principles such as adding new native species vegetation to create habitat and linkages • All plantings will be done in accordance with the guidelines described in the Flood Protection Landform EA.
Aquatic Species and Habitat	• Degradation of aquatic habitat as a result of sedimentation and soil erosion into surface water bodies and along shore due to construction activities • Degradation of aquatic environment from accidental spills • Improvements to riparian habitat through landscaping and restoration	• Institute runoff/sedimentation and erosion controls during all construction work and monitor and maintain/upgrade controls appropriately until the site is stabilized • Cover stockpiles with sheeting, tarps, or vegetation cover • Minimize vegetation cover removal • Filter or settle out sediment before the water enters any drainage pathway, including storm water systems • Initiate planting or reseeding of disturbed areas immediately after construction is completed, with native non-invasive species • Control overland flow up gradient of exposed areas by use of diversion ditches, bales, vegetation filter strips, and/or sediment traps • Create new fish habitat opportunities by applying appropriate restoration techniques referring with TRCA's Aquatic Habitat Strategy for best practices that may be applied • Use permeable surface treatments wherever possible • Require construction contractors to have a spill response plan • Any construction works or landscaping on the Lower Don River Flood Protection Landform (FPL) should be reviewed in advance with the Toronto Region Conservation Authority to ensure that the integrity of the FPL is protected, and that the flood conveyance of the resulting floodway is not impaired. • All plantings will be done in accordance with the guidelines described in the Flood Protection Landform EA.
Air Quality	• Decrease in ambient air quality for short term from pollution, odour or dust (suspended particulate) and emissions resulting from wind erosion of disturbed ground surfaces, and associated with demolition, excavation and construction vehicles (diesel fumes, oils, other fuels and lubricants) • Minor incremental changes in localized air quality where road length is increased or new lanes were added • Decrease in harmful emissions (e.g., volatile organic compounds) as a result of the clean up of contaminated sites • Opportunities for alternative modes of transportation (future transit, cycling, walking) contributes to improved air quality	• Ensure emission control devices on equipment are functional and effective • Minimize dust emissions through the use of dust control measures (e.g., water spray or calcium chloride on exposed soil surfaces) • Use physical barriers (e.g., shrouds, scaffold canopies) to contain dust
Noise/Vibration	• Short term noise associated with construction vehicles and activities • Relocated roads may impact localized noise conditions	• Restrict construction activities to hours prescribed by local noise by-law • Ensure equipment is in sound working order • Recommend and implement noise attenuation measures for new construction, where necessary • Review noise conditions and abatement requirements for all new development.

Exhibit 9-5 Potential Effects and Environmental Management Practices for Transportation, Stormwater, Wastewater and Sanitary Systems		
Environmental Sub-Components	**Potential Effects based on Potential Environmental Interactions**	**Potential Environmental Management Practices**
Soil	• Degradation of soil quality as a result of spills (oil, gas, and lubricants) associated with construction activities • Improved soil quality as a result of remediation activities	• Prepare a spill response plan • Immediately report and manage any leakage or spillage with appropriate spill contingency equipment and measures • Lubricants, solvents, paints and other chemicals will not be stored on-site over night except within construction trailers secured with lock and key, on bermed and lined sites • All construction equipment shall be in good working order, especially with respect to leaks or oil, fuel or hydraulic fuels • Use designated storage and refueling areas well removed from surface water bodies • Segregate excavated materials (clean material, impacted but re-useable material, material requiring treatment or disposal) • Develop remediation plans that comply with the Guideline for use at Contaminated Sites in Ontario
Groundwater	• Change in groundwater recharge due to change in permeability of the site • Degradation of groundwater quality as a result of spills (e.g., oil, gas, and lubricants) associated with construction operation • Minor de-watering may take place, however quantities will be minimal, and not in areas where groundwater is used as potable drinking water	• Prepare a spill response plan • Design dewatering measures to minimize volume of potentially contaminated ground water to manage
Surface Water Quality/Quantity	• Increased runoff and alterations of flow patterns due to changes in permeability of the site by the removal of structures by demolition or excavation activities • Degradation of surface water quality as a result of sediment washoff during construction and as a result of stockpiling of construction wastes near water bodies or in natural drainage paths • Increased infiltration opportunities associated with permeable paving and landscaping • Progressive approaches to managing stormwater can have a beneficial impact on surface water quality	• Institute runoff/sedimentation controls during the work • Manage lubricants, solvents etc. as described above • Control overland flow up gradient and down gradient of exposed areas by use of diversion ditches, bales, vegetation filter strips, and/or sediment traps • Minimize impermeable surfaces in design • Minimize vegetation cover removal • Initiate replanting or reseeding of disturbed areas immediately after construction is completed
Business and Employment	• New employment associated with construction activities • Impacts on businesses located within the study area • Temporary disruptions to access to business from construction activities	• City Economic Development in partnership with ORC will assist businesses to find new accommodation • Construction Staging plans to maintain business access or limit access restrictions to times outside of core business hours
Aboriginal Use of Traditional Land Resources	• No interactions expected	• Keep First Nations informed
Built Heritage	• Heritage structures are avoided	• Consult with the City's Heritage Presentation staff where construction occurs in close proximity to heritage buildings
Archaeology	• Potential for disturbance to archaeological remains during subsurface soil excavation • Site has low archaeological potential, except in the vicinity of the Thornton Blackburn site.	• Conduct a Phase 2 Archaeological investigation for works in proximity to the Thornton Blackburn site • If buried artifacts are located during construction, contact a licensed archaeologist and notify the Ministry of Culture
Private Property	• Potential for disturbances to private properties	• Retain access to all private properties during construction • Minimize nuisance impacts to private properties during construction • Lands that need to be acquired from ORC are subject to the ORC Class EA process (see Chapter 12)
Recreation	• An interconnecting grid of roads with cycling and walking paths will provide opportunities for recreation • Improve alternate modes of recreation and transportation by access to new lands uses and construction of non-vehicle bridges (subject to future EA approvals)	• Alternate detour routes will maintain access during construction
Traffic and Movement of Goods and Services – Emergency Services	• Service or traffic disruptions may occur (e.g., temporary road or lane closures) • Construction of structures may have temporary or long term impact on navigation in water ways • During construction there may be some disruption to emergency vehicle movements • Improved pedestrian and cycling opportunities	• Implement alternative route options or traffic controls during construction • Minimize service/access disruptions during construction • Ensure that police and emergency vehicles are aware of the road construction • Prepare alternate routes for vehicles that normally use these roads
